AURELIA RESTAURANT WEBSITE TEMPLATE

# Getting Started Guide

Set up your own restaurant website in about 15 minutes — right in your browser, no coding, no installs.

SETUP-WIZARD.HTML · NO-CODE EDITION

BEFORE YOU START

# What you're about to do

Everything below happens inside **setup-wizard.html**, a single file included in your download. It runs entirely in your own browser — nothing you type or upload is ever sent anywhere. Here's the whole process, start to finish:

1 **Open the wizard**
Double-click setup-wizard.html — no install, no server.

2 **Fill in your restaurant's info**
Name, WhatsApp number, contact details, opening hours.

3 **Pick your look**
Choose 1 of 6 color palettes and 1 of 6 font pairings on the Brand tab.

4 **Add your menu**
Edit, add, or remove dishes by category.

5 **Fine-tune text & photos**
Click directly on the live preview to rewrite anything or swap a photo.

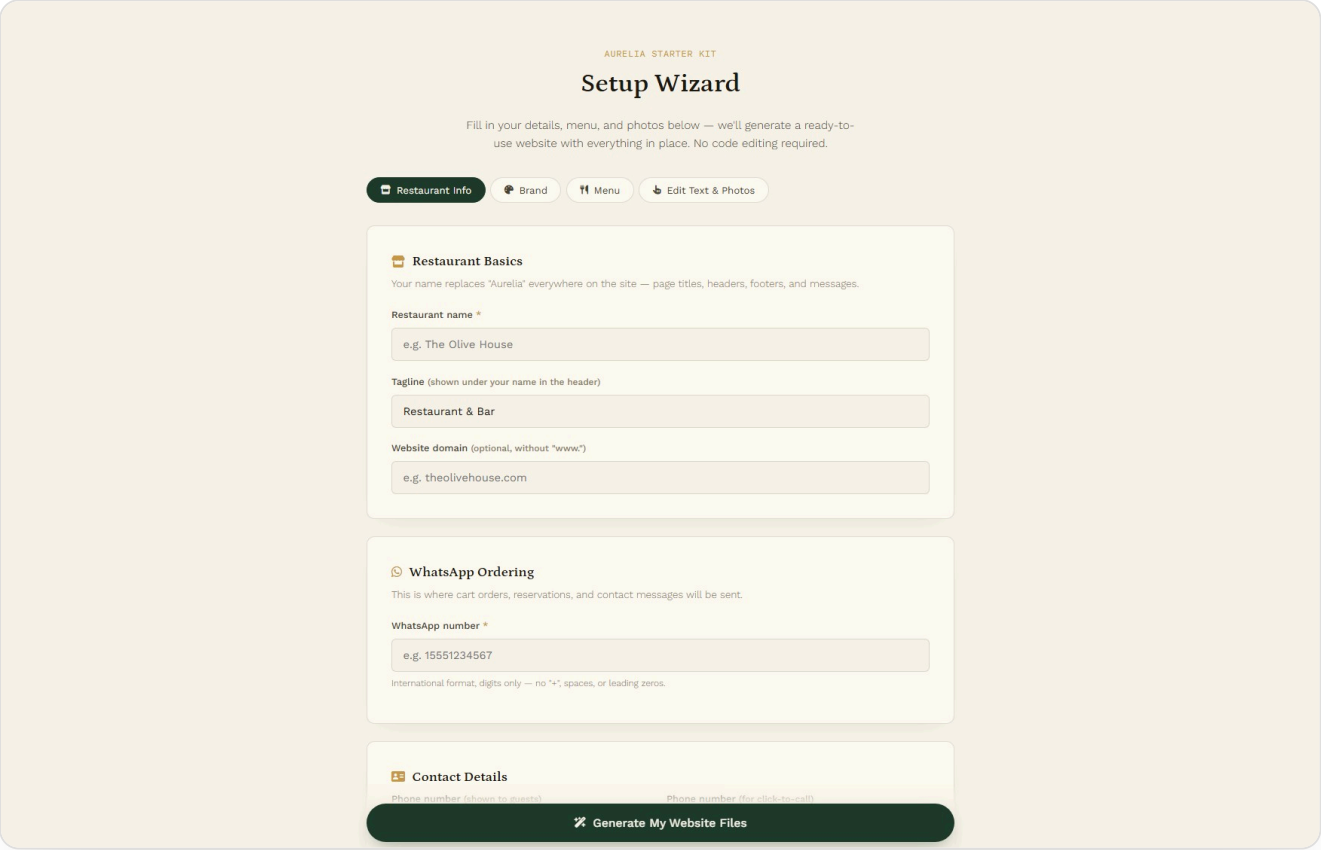

6 **Generate & download**
One click builds a ready-to-host ZIP with everything filled in.

7 **Publish it**
Upload the files to any host — we'll show you the easiest free option.

Tip: keep **setup-wizard.html** in the same folder as the rest of the files — it needs them to build its previews.

# 1 Open the wizard & fill in your details

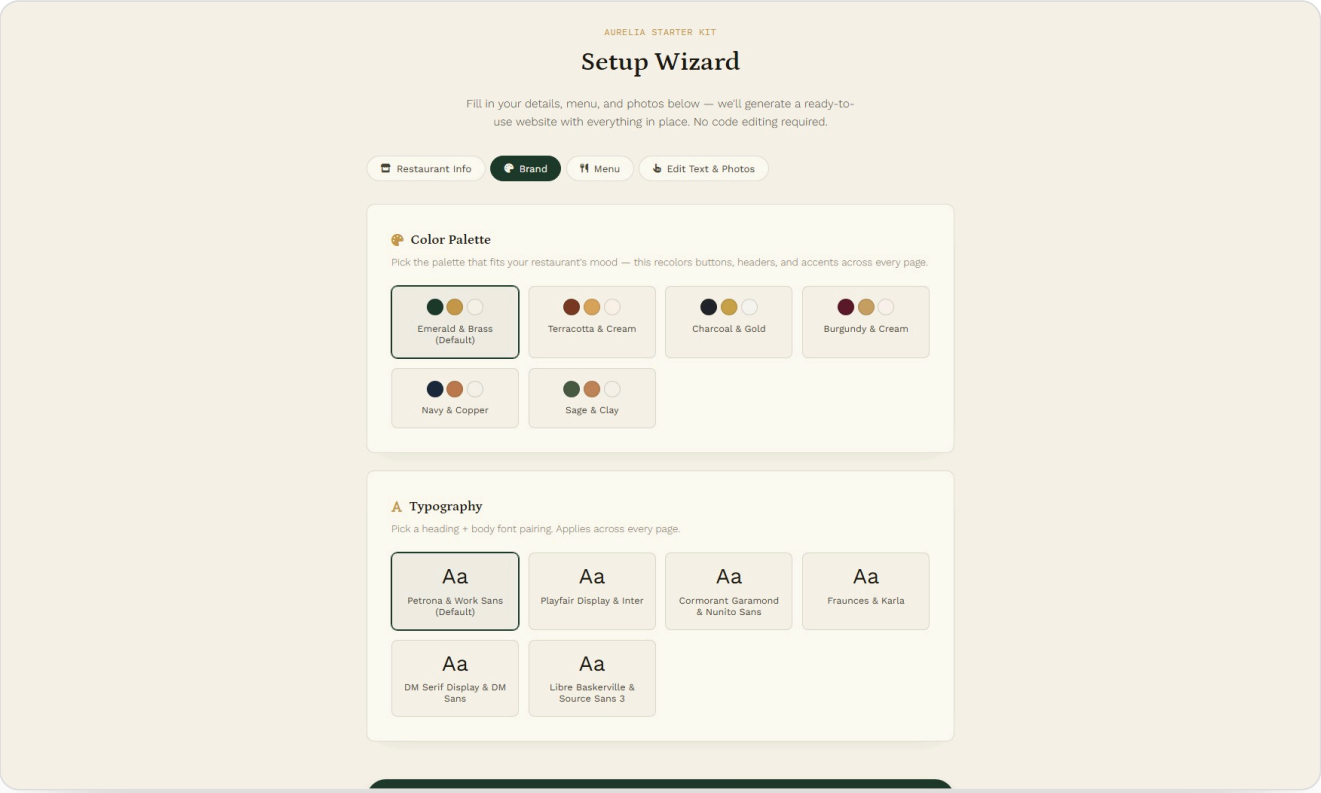

Find **setup-wizard.html** inside your downloaded folder and double-click it — it opens right in your browser. The **Restaurant Info** tab is where you start: your restaurant's name, a short tagline, your WhatsApp number (this is where orders, reservations, and messages will be sent), contact details, and your opening hours.

Only the restaurant name and WhatsApp number are required — everything else can be filled in later.

# 2 Pick your colors & fonts

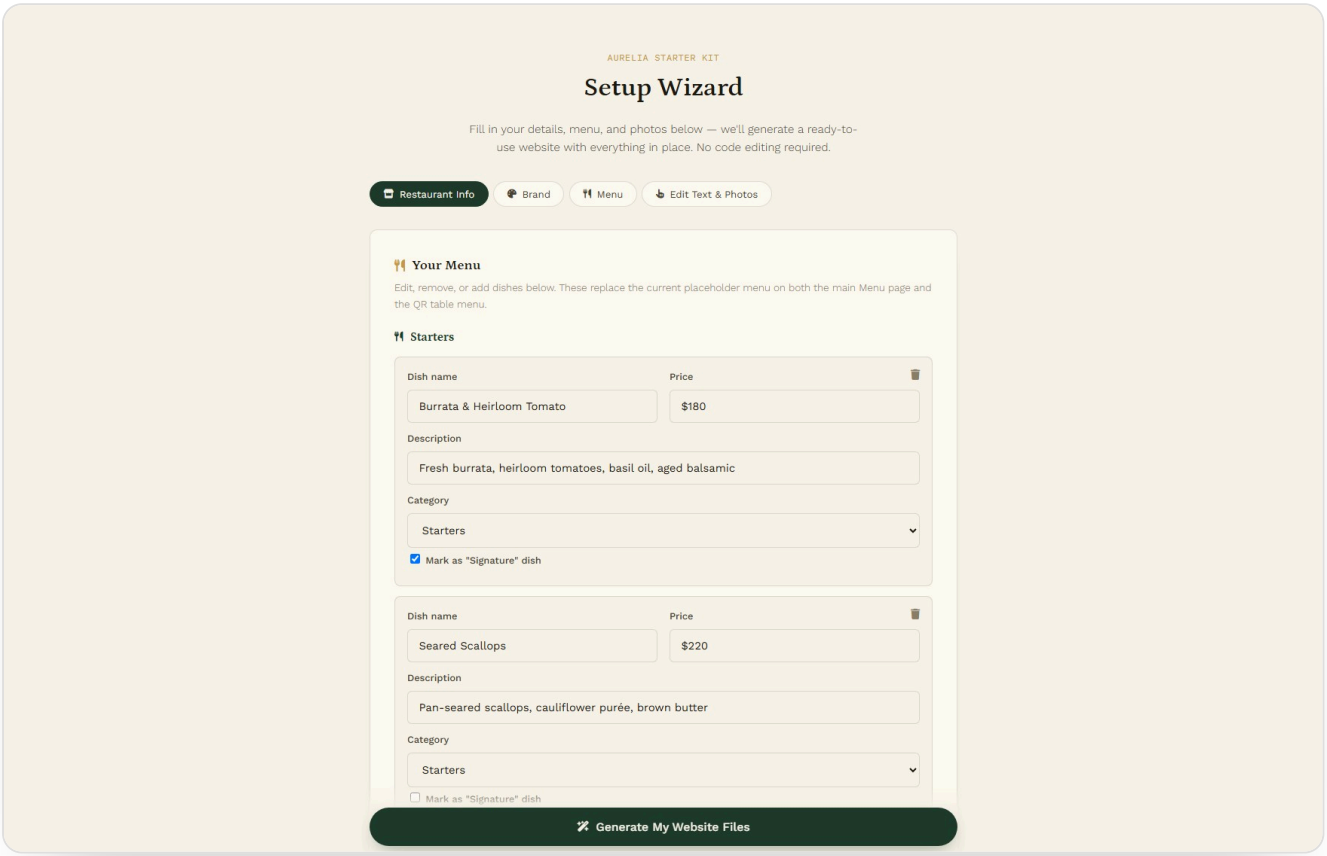

Click the **Brand** tab. Choose the color palette that fits your restaurant's mood, and a font pairing for your headings and body text. This instantly recolors and refonts every single page — buttons, headers, everything.

Not sure yet? Leave it on the default — you can always come back and change it later.

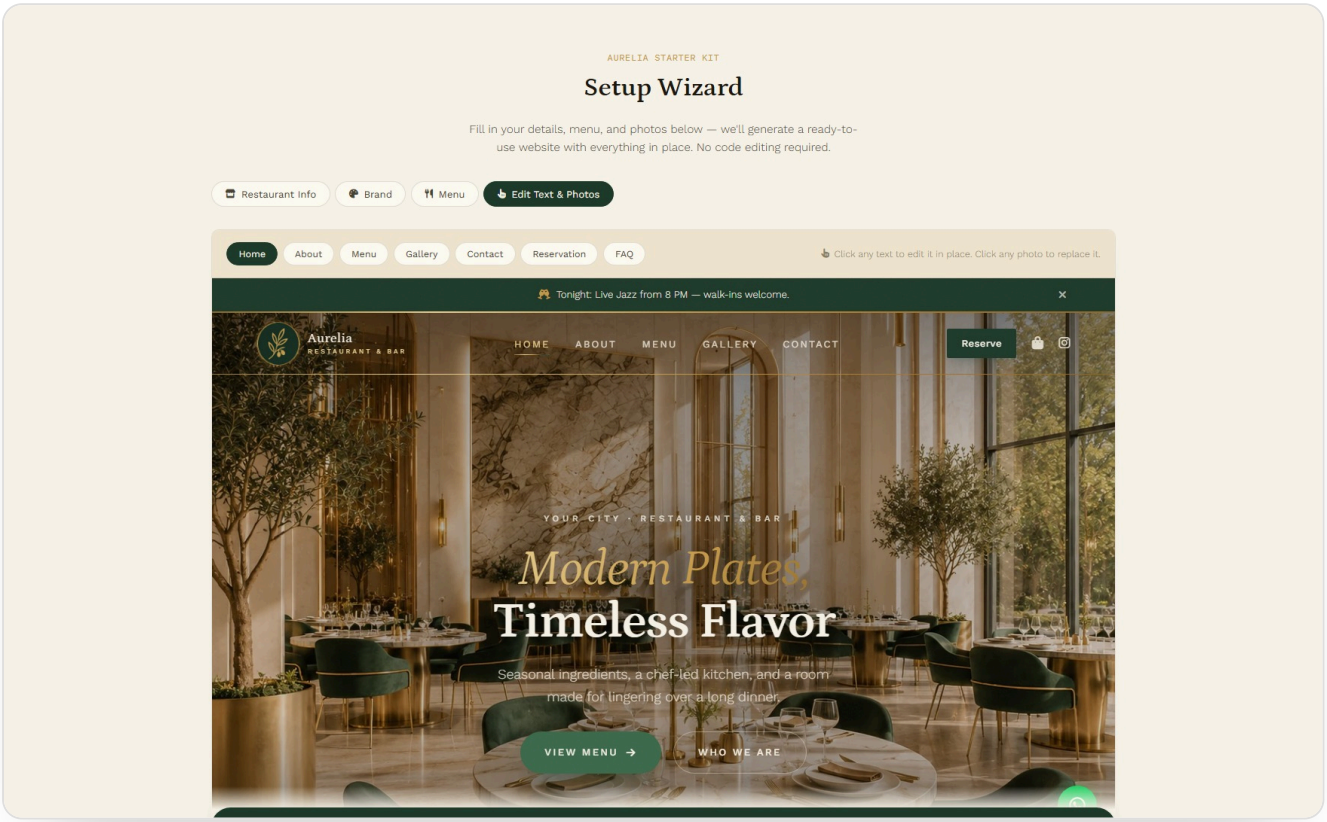

# 3 Add your menu

Click the **Menu** tab. Every dish is grouped by category (Starters, Mains, Desserts, etc.) — edit the name, price, and description of any placeholder dish, tick "Signature" for dishes you want to highlight, or use "Add a dish" to add more. Remove any dish you don't need with the trash icon.

# 4 Fine-tune text & photos

Click the **Edit Text & Photos** tab — this is a live preview of your actual site. Click any piece of text to rewrite it right there, or click any photo to upload your own replacement. Use the page tabs above the preview (Home, About, Menu, Gallery, Contact, Reservation, FAQ) to move between pages.

## 5 Generate, download & publish

When everything looks right, scroll down and click **Generate My Website Files**. Your browser downloads a ZIP with every page already filled in — no further editing needed.

**Easiest way to publish it (free, no technical skill needed):**

1. **Unzip the downloaded file**
   You'll get a folder with all your website's files.

2. **Go to app.netlify.com/drop**
   No account needed for a quick preview; sign up free to keep the site live long-term.

3. **Drag your unzipped folder onto the page**
   Netlify uploads it and gives you a live web address in seconds.

4. **(Optional) Connect your own domain**
   Netlify's site settings let you point a domain you already own at your new site.

> Prefer traditional hosting (Hostinger, cPanel, etc.)? Just upload the same unzipped folder via their file manager or FTP — no build step required either way.

GOOD TO KNOW

# Questions you might have

| | |
|---|---|
| **Do I need to know how to code?** | No. The whole setup happens by filling in forms and clicking on the live preview. |
| **Can I change the colors/menu later?** | Yes — reopen setup-wizard.html any time and generate a fresh ZIP. |
| **Where do WhatsApp orders go?** | Straight to the WhatsApp number you enter on the Restaurant Info tab — guests never need to create an account. |
| **Is my data sent anywhere while I edit?** | No — the wizard runs 100% in your browser. Nothing is uploaded until you choose to publish the finished files yourself. |
| **What about the Privacy Policy page?** | It ships as a general template — open privacy-policy.html and update it with your business's details before going live. |
| **I'm stuck — where can I get help?** | Check README.md in your download for more detail, or reach out through the contact info on your Etsy purchase. |

❤ Thank you for choosing Aurelia — we hope your new site serves you (and your guests) well.
